TIDES OF FALLOUT

Game Art Design - From Character to Environment Design

Tides of Fallout devastated by global warming and nuclear warfare, "Radiant Abyss" explores the life of a survivor living in a dried-up seabed, where bio-weapons mutated by radiation pose constant threats.

Role: Game Concept Designer

Synopsis

World Background

In the desolate future of “Tides of Fallout,” Earth’s natural resources have been severely depleted due to centuries of overuse. Global warming, unchecked pollution, and a series of devastating wars over depleting resources have pushed the planet to the brink. Nuclear weapons have left large areas that were no longer habitable. The oceans have mostly dried up, and vast tracts of deserts are in their place. Only 30% of the entire planet’s water resources are left now.

Amid the chaos of war, people developed bio-weapons to gain an edge in battle. These organisms were engineered to absorb radiation and convert it into kinetic energy, making them powerful and efficient warfare tools. However, after the wars ended, these bio-weapons were abandoned and left to roam the wastelands. Over time, their bodies began to mutate due to radiation overload, and they transformed into hostile creatures with an uncontrollable urge to attack anything they encountered. Bio-weapons that were not overloaded remain mostly docile, but once they absorb too much radiation, they might either begin to mutate or an orange nuclear energy surges within them, spilling into the environment and spreading contamination.

The main character lives in one of these dried seabeds, surviving in the ruins of an abandoned submarine. In this harsh environment, the protagonist must navigate the hostile landscape, avoiding mutated bio-weapons, and uncovering remnants of humanity’s past mistakes.

Inspiration

& Brainstorm

The concept for “Tides of Fallout” is inspired by the pressing issues of climate change and resource depletion in today’s world.

The bio-weapons represent the unintended consequences of humanity’s pursuit of power and serve as reminders of the danger inherent in unchecked scientific advancement.

Image 1: Brainstorm

“Tides of Fallout” draws inspiration from films like Dune and games such as Fallout, Combining post-apocalyptic esthetics with a unique oceanic twist.

I hope to create a world that challenges players to think about humanity’s impact on nature and the consequences of unrestrained technological progress.

The Wander

The Wander moves through the remains of a fractured world with no clear destination but an unmistakable resolve. Bearing the weight of memories from a world now lost, they are a lone traveler who survives on instinct and resilience. Although their past is hidden, their strength lies in their calm endurance, shaped by countless struggles in hostile lands.

Silhouettes

Linework

Inspiration

The design of The Wander is inspired by a unique fusion of insect and mechanical aesthetics, aiming to create a character that embodies both organic grace and industrial strength.

Headphone Design

Robotic Arm Design

The Protector

The Protector is a strong and reliable figure, focused on keeping others safe in a dangerous world. Unlike *The Wander*, who moves alone, *The Protector* believes in the importance of protecting others and bringing stability. Their sturdy build and reinforced armor make them a solid presence, someone others can depend on. Although the world around them is harsh, *The Protector* remains committed to their role, facing challenges with a sense of duty and care for those who rely on them.

Leg Design

The protector's bodily functions are sustained by nuclear energy, so there are specialized charging bays to provide them with power.

Inspiration

The concept for The Protector emerged from the idea of resilience and sacrifice, blending a military sense of duty with the challenges of a post-apocalyptic world. This mix of past and future elements—military style and nuclear-powered prosthetics—reflects The Protector's role as a guardian who stands firm against adversity, embodying strength, honor, and survival in a broken world.

Battery Charging Station Design

Weapon Design

The Rifle

This long rifle, carried by The Wander, is far from a typical firearm. Designed with a dark, almost haunting style, it incorporates natural elements that make it feel more like a creature than a machine. Its strange form serves as both camouflage and protection, helping The Wander blend into desolate landscapes.

Replacement of cartridges

Bullet clip
Connected by several
biological tentacles.

The Laser Gun

The Protector's laser gun is a powerful, high-tech weapon that harnesses nuclear energy to fire concentrated laser beams. Designed for precision and strength, this rifle allows. The rifle's advanced design reflects The Protector's skill in combining raw energy with tactical knowledge, making it a reliable weapon in harsh, unpredictable conditions.

Energy storage replacement

The bottle contains a nuclear
energy source that can power
a laser gun.

Nuclear energy is gathered in a tube in the gun
and then turned into laser light.

The bulge in the front section of the gun snaps
into the sand to increase stability and reduce
recoil.

C-1437 Bio-Creature

This creature is a bio-engineered weapon, created in the aftermath of humanity's struggle for survival, coded C-1437. Designed with traits that blend predatory instincts and artificial enhancements, it serves as a relentless hunter in the wastelands. Its body is reinforced with synthetic armor-like plating, and an unstable nuclear energy core powers its movements. Engineered to adapt and survive in harsh conditions, this creature is both terrifyingly resilient and aggressive.

The c1437 will travel to places with high levels of radiant energy to continually absorb it through the armor on its body. All radiation energy is converted into nuclear energy stored in the body to power the organism.

C-1437 Infancy

Code c1437s are incapable of combat, so in order to avoid danger on the ground, they have a pair of bizarre wings. These wings have a psychedelic effect, and staring at them for long periods of time produces a vertigo effect.

Side view

Front view

Overload and infection

When the c1437 body load exceeds the upper limit, it becomes infected with absorbed radiant energy and is aggressive. After a certain amount of time, the radiant energy pours out of the body and life ends.

Vehicle design Aircraft

In a world where resources are scarce and survival is uncertain, this aircraft—designed with the shape and movement of a manta ray—was originally created as a powerful weapon during past wars. This aircraft, inspired by the sleek form of a manta ray, glides silently through the skies with a fluid, organic grace. Its streamlined wings and tail mimic the smooth curves of its oceanic counterpart, making it both agile and intimidating. Equipped with a powerful laser cannon in the nose, the aircraft can fire precise, energy-based attacks, giving it an edge in aerial combat.

Inspiration

The design for this aircraft came from studying the elegant movements and structure of manta rays. I wanted to create a machine that embodied the same sense of power and fluidity, blending natural forms with high-tech functionality.

Shelter: Submarine

Once a symbol of human exploration, this abandoned submarine now lies silent on the ocean floor, half-buried in sand and algae. It serves as a refuge for those few who survive in the desolate world above. The submarine's structure provides basic shelter and protection, but the constant creaks and groans remind its inhabitants that it is a fragile sanctuary.

Inside the abandoned submarine, the main character has transformed cold, metallic rooms into a livable space. Using whatever materials could be salvaged, they've arranged makeshift bedding, storage areas, and dim lighting to add a sense of comfort to the otherwise harsh environment.

The submarine's thick, reinforced hull provides protection against external threats, turning it into a secure sanctuary amidst a dangerous world. Though the space is cramped and filled with remnants of its original purpose, the main character has managed to create a sense of home, making the submarine a safe retreat in the desolate wasteland.

Abandoned Buildings

Scattered across the desolate landscape are remnants of a once-thriving civilization—dilapidated facilities and empty houses that now stand as silent witnesses to the past. Rusty metal frames, shattered windows, have overtaken the buildings, blending human-made structures with nature's relentless takeover. These abandoned sites serve as both resources and refuges for survivors.
